

Pulse Secure Installation Guide

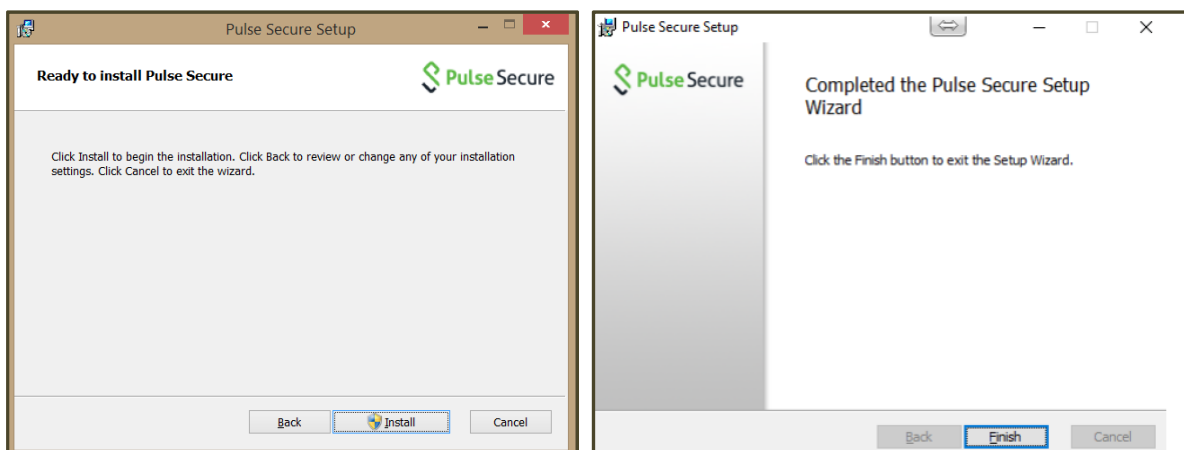

1. Access the library website at <http://library.mfu.ac.th> and select the menu “Tools” to download the software based on your OS

2. Double Click the file to install and Click “Next” button

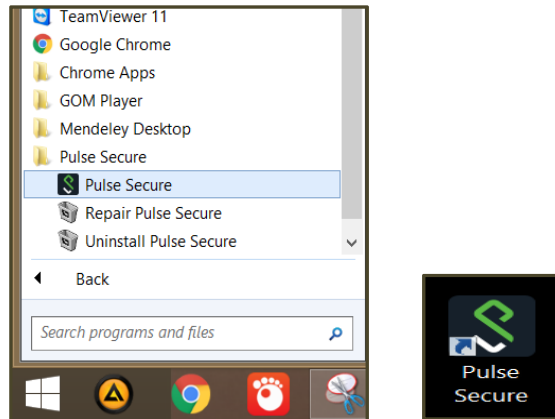

3. Click “Install” to install the software. When you finish installation, click “Finish”

Pulse Secure Use

1. Click to open the program for “Start Menu” or from Desktop. You will see the icon as in the picture below.

2. When it is opened, you can create “Connection” to connect MFU network by clicking “+” button

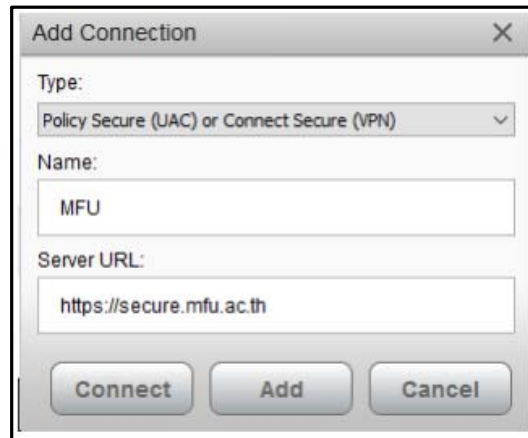

3. In the “Add Connection” page, fill the following information to connect.

Type: Policy Secure (UAC) or Connect Secure (VPN)

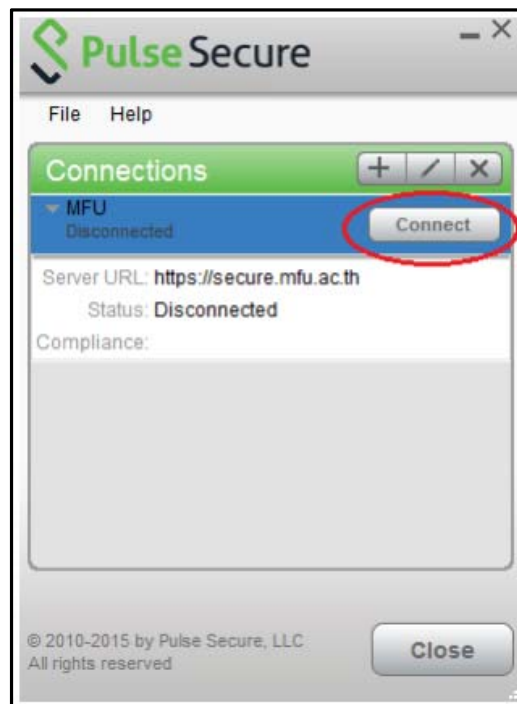

Name: MFU VPN

Server URL: <https://secure.mfu.ac.th>

Then, click “Add” button

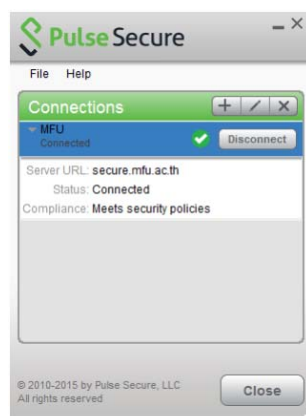

4. Then, click “Connect” button to connect the network.

5. The system will ask your “Username” and “Password”. The username and password are obtained when your register in the first year.

6. When it is connected, the status will be shown as in the following picture. Moreover, when you finish using it, you can click “Disconnect” button.

Remark:

1. When you are log in, the system may require you to upgrade a new software as shown in the picture. You can click to upgrade the new one

2. The “Username” and “Password” to connect the university network was already distributed by CITS (The Center for Information Technology Service) which is the same one for WIFI use. If you cannot use it, please contact CITS at 0-5391-6411

3. If you have any questions for the use, please contact us at library-help-desk@mfu.ac.th or 0-5391-6339
